ABSTRACT

E – Community for PSM Supervision system is a system that developed for helps supervisor and bachelor student’s projects organized supervision process. This system developed for particular operation on the internet technology. This system build base on traditional supervision process that for each supervisor have their own small group. The small group in this system we called one community supervision. This system can helps supervisor and student in appointment process, time tables and sending information or document for each other in the community. Beside that, the user can use forums module or chat room for discussing online. This system is programmed using based on Active Server Pages language to make the dynamic system and SQL as a system database. Macromedia Dreamweaver MX used to change the code base system. Beside that, Microsoft office used for make a repot about this project. This system developed based on prototype evolution models as a development mythology.
