Universiti Teknologi Malaysia

NOVEMBER 2005
ABSTRACT

Geography is a study of a physical of nature. Therefore it is not affectively learned by only memorizing the facts without understands it. There also other weaknesses that can cause the problems of scoring low grades in the subject such as lack of revision by the student, no discussion among the students and also the teacher's poor style of teaching. These problems can be overcome by using multimedia application on the web. Geography is more fun and affective to be learned and taught with presentations that consist of text, images, animation, video and audio. Where else, the web application will enable the students and teachers to reach for the site through the internet.
