ABSTRACT

Sistem Pengurusan Anak Yatim dan Miskin Darul Hanan Berasaskan Web is a system which is developed to smoothen the administration of Darul Hanan. This system is intended to store all information regarding orphans in Darul Hanan include health information, their educational level as well as their family background in Darul Hanan. At this moment, all the administrative jobs are done manually, through log books and files. Therefore, the main development of this system is to eliminate the paper-based job to a fully complete computerized system. With this system, all information will be ensured secure and searching technique implemented in this system produce faster and more efficient result. This system is developed using JSP programming language and MySQL as the database. Meanwhile, Web Engineering methodology has been chosen to guide the development of this system. Hopefully, this system will produce efficient, faster, increase productivity and help to smoothen the administration job at Darul Hanan Orphanage.
